

## ELASTIN 3™

### Advanced Stretch Mark Prevention

**New Formula!**

- **Formulated with Regu®-Stretch, a peptide complex clinically proven to prevent stretch marks**
- **Prevents future stretch marks**
- **Tightens and smooths all skin types**
- **Fast-absorbing**
- **Paraben free**

6 OZ. Bottle

MSRP **\$49.95 ea.**

#### Advanced result-oriented ingredients

We have three layers of skin: the epidermis (outer layer), the dermis (middle layer), and the subcutaneous stratum (deepest layer). Stretch marks (also known as striae gravidarum) occur in the dermis; the elastic, resilient middle layer that allows skin to retain its shape. When the dermis is constantly stretched, the skin becomes less elastic and the connective fibers break. The result is the markings we know as stretch marks. Also, when the skin is cut or scraped the injury heals but an unsightly scar will remain.

*Elastin3 contains Regu®-Stretch, a unique complex that protects skin structure from tissue degradation, while stimulating the synthesis of collagen to prevent the formation of stretch marks.*

Strengthening skin's elasticity is the key to stretch mark prevention. Elastin is what your body naturally manufactures to control skin's elasticity. The extreme, rapid stretching of the skin during pregnancy weakens the elastin fibers. Preventative creams that contain collagen and soy, can reinforce skin's elastin. Elastin3 does just that! It is a smooth, fast-absorbing cream that is

formulated with Regu®-Stretch, an excellent, protective and repairing complex especially intended for the prevention of stretch marks. Our stretch mark prevention cream contains rare powdered elastin concentrate with almost 100% amino acid concentrate. Combined with high-potency collagen and boosted by soy protein, Elastin3 lightens and firms existing marks and prevents future stretch marks while giving skin a more youthful appearance. This new, innovative stretch mark therapy cream (proven by Dr. S. M. Braun in Paris, France) is almost 100% effective in preventing stretch marks when used at the beginning of pregnancy and continued daily until six weeks after birth.

While cocoa butter makes skin feel softer, it does not provide skin with the natural elements affecting skin elasticity provided by Robelyn Labs Elastin3. After using Elastin3 post-pregnancy skin can be tighter, smoother and more natural looking and feeling.

Elastin3 prevents the development of stretch marks with our exclusive peptide enhanced treatment which is safe for use before, during, and even after pregnancy. Ideal not only for new moms, but women in any stage of life. Elastin3 contains the high-potency ingredients that help prevent, treat, firm, repair and rejuvenate damaged skin. It is effective for all skin types.
