

ELASTINMD™

Stretch Mark Repair Therapy

- **Visibly reduces the toughest stretch marks**
- **Improves skin elasticity and firmness**
- **Significantly improves skin suppleness and appearance**
- **Paraben-free**
- **Guaranteed visible results in 30 days**

6 OZ. Bottle

MSRP **\$69.95 ea.**

Approximately 80% of people have stretch marks of some kind. Whether from puberty, weight gain, or the most common cause – pregnancy – stretch marks are unsightly and make you self-conscious.

What causes stretch marks?

Pregnancy, weight training, and weight fluctuations cause continuous and progressive stretching of the skin – causing skin tension, and damaging the dermal collagen fiber and proteins. Stretch marks (striae) develop when the connective tissue framework of the skin is ruptured. When the components of the skin (the “building blocks” – collagen, elastin, fibrillin fibers) degrade, the structural integrity of the skin is impaired, and “scarring” occurs in the dermis. This scarring is what presents itself as stretch marks.

Another contributor to pregnancy stretch marks

Evidence indicates that pregnancy is accompanied by an influx of the hormone glucocorticoid, which prevents the formation of collagen and elastin fibers. When the production of elastin and collagen is interrupted or damaged, stretch marks form.

ElastinMD eradicates even the most severe stretch marks - new or old

Eliminating stretch marks is achieved by healing and restoring the skin. ElastinMD is a potent formulation that contains a new weapon in the battle against stretch marks. ElastinMD contains Vanistryl® – a peptide complex that attacks stretch marks from multiple angles: By inhibiting the degradation of the “building block” components of the skin and reducing tension in the skin, ElastinMD protects the connective tissue from further degradation. This peptide formulation also stimulates elastin and collagen formation, and provides healing properties that help regenerate the damaged components of the dermis.

While the peptide complex in ElastinMD stimulates the production of elastin and collagen, Hydrolyzed Elastin and Soluble Collagen supplement the body’s production of these vital components, and Soy Protein provides even more rejuvenating benefits.

In vivo testing showed improvement in firmness, softness, brightness, color, length and thickness, and general appearance of the stretch marks – in 100% of the participants. Skin elasticity was also greatly improved. After 30 days, the results were visible. After 60 days, the results were significant.
